**Introducing the E-Dredger® by E-Crane®**

Superior operating balance permits mounting on virtually any type of barge.

Hydraulically adjustable cab for optimum operator visibility.

Specialized hydraulic grab remains closed when completely filled above and below water.

Crane Monitoring System has a remote access connection for troubleshooting and reporting, plus integrated software for visualization and guidance.

The new E-Dredger features the renowned E-Crane equilibrium principle for smooth, efficient, energy saving operation in dredging and related applications.

The boom, stick and grab are in near perfect balance in all conditions, which eliminates tipping and permits operation on virtually any barge, with or without spud poles. The powerful grab remains

closed when filled and above the water level. SuperLift Mode accommodates grab overload.

Low height for mobility under bridges. Tail swing radius is less than 7.5m. Easy disassembly and reassembly. Unique open stick eliminates buoyancy. All electric power; 225kW (300hp). Variety of outreach, downreach and lifting capacities.
